

Senhores,

Segue telas para configuração do SMTP.

#####

Instalação serviço SMTP local no Windows 2008.

Abrir o gerenciador do IIS 6

Configurar autenticação e saída:

Seguir uma boa prática definindo os ips que são permitidos para conectar no SMTP e porta diferenciada:

Permissão somente pro localhost e ip da interface local.

Definir um tamanho máximo por mensagem (10MB por exemplo)

Definir o login e senha do e-mail da empresa:

Definir porta onde será entregue o e-mail:

Definir o servidor SMTP da empresa:

Após ajustar as configurações, executar “STOP” e “START” para carregar as novas definições.

Configurar no B2B para entregar localmente na porta 2525.
